Energy-Efficient Heating and Cooling Rebate Form

We recommend obtaining bids from your HVAC contractor AND your electrical contractor before making any decisions or purchases. For the best results, please follow these steps:

1. Contact an energy advisor at **Prairie Energy Cooperative** for assistance with the energy-efficiency guidelines established for our rebate program.
2. Work with an HVAC contractor to purchase your heating and / or cooling system.
3. **BEFORE the system is installed**, hire an electrical contractor to get the necessary electrical wiring completed. Your electrician will need to:
    a. Contact your HVAC contractor to determine how many amps it will take to operate the new heating system.
    b. Obtain a heat meter socket from one of the member service advisors at your local **Prairie Energy Cooperative**. **Greg Anderson** can be located in the Clarion office, and **Don Kammrad** is in the Garner office.
    c. Install the heat meter socket and complete the wiring for the electric heat meter that will be located outside your house.
4. **AFTER the heat meter socket is installed and all required inspections by local or state governmental agencies are approved**, contact **Prairie Energy Cooperative** to install the heat meter.
5. **AFTER the heat meter has been set**, complete the rebate form below, and return it to your local **Prairie Energy Cooperative** office.

REBATE FORM

All information must be submitted before we can process your rebate. Prairie Energy Cooperative reserves the right to inspect equipment and verify information before issuing a rebate. The member shall observe and comply with all ordinances, laws and requirements of all units of government and governmental agencies having jurisdiction over the work to be performed.
